

Two valuable resources for the entire compression industry

Providing the most comprehensive and current information available on compressors, drivers and related systems and services, the *Compression Technology Sourcing Supplement* (CTSS) is the gas compression machinery industry's favorite reference.

Online and in print the CTSS presents basic specifications for compressors, engines, mechanical drive turbines, motors and drives provided by the manufacturers themselves and organized for easy comparison.

The value of the print version of the CTSS is enhanced with over 75 pages of technical background material excerpted from the Gas Processor Association's Engineering Data Book - 12th Ed. Great for training!

We package the print version of the CTSS with every print copy of the January/February issue of *COMPRESSORTech™*, and post the online version shortly thereafter.

✓ MORE FOR LESS

Why imagine such astounding accomplishment when it's real? The 2010 *Compression Technology Sourcing Supplement* (CTSS) will represent an unbeatable combination of rate cuts even as it rolls out online as a powerful new web resource offering exciting marketing tools you'll love.

First, the price cut

The price of participation in the 2010 *Compression Technology Sourcing Supplement* and all new online version at CTSSnet.net will amaze you.

Compression Technology Sourcing Supplement and CTSSNet.net

Two (2) Pages	€4130

Prices include 15% agency commission, no cash discount.

Space Reservation Deadline: November 13, 2009
Materials Deadline: December 4, 2009

Next, the high-performance beauty of CTSSnet.net

In its present form, the online version of the CTSS specification and sourcing guide (currently at <http://www.ct2ss.com/index.asp>) is actually a hyperlinked version of our print product. No more. In 2010, visitors will experience a completely re-engineered version of the CTSS built upon a completely new architecture that allows us to offer many exciting new benefits at no cost to you.

To preview the new design and functionality, visit the all-new online version of Diesel & Gas Turbine Publications Global Sourcing Guide at www.GSGnet.net and be amazed. When introduced, CTSSnet.net will mirror all the advanced functionality you'll discover at GSGnet.net.

Little factoid

The all-new GSGnet.net version of the Global Sourcing Guide went live on June 4, 2009 and within two months had already logged over 50,000 page views. Not bad at all for a niche publication!
